

REPORTS
OF THE
TREASURER, SELECTMEN
AND
SCHOOL BOARD,
OF THE
TOWN OF NEW HAMPTON,
FOR THE
YEAR ENDING MARCH 1, 1891.

BRISTOL, N. H. :
R. W. MUSGROVE, PRINTER.
1891.

REPORTS
OF THE
TREASURER, SELECTMEN
AND
SCHOOL BOARD,
OF THE
TOWN OF NEW HAMPTON,
FOR THE
YEAR ENDING MARCH 1, 1891.

BRISTOL, N. H. :
R. W. MUSGROVE, PRINTER.
1891.

N
352.07
N527
1891

VOTED, That the selectmen publish an itemized account of all money received and paid out by them; including that for services and abatements. Also that they publish the total valuation of the town, embracing the number of horses, oxen, cows, sheep and all other stock; the number of acres of land, and the names and amount of each individual's taxes, and the names and amounts of all abatements; all to be embraced in the town report, and to be distributed to the voters at least five days previous to town meeting.

The above is a true copy of vote passed at annual town meeting held Tuesday, March 11, 1890.

Attest:

FRANK P. MORRILL,

Town Clerk.

Inventory.

FRANK P. MORRILL, Town Clerk.

ANNUAL REPORT
—OF THE—
SCHOOL BOARD.

We have the honor to present to the citizens of New Hampton the following report, it being the fifth under the new law :

Respectfully,

JOHN W. SCRIBNER, }
REBECCA R. BLAKE, } School Board.
FRANK P. MORRILL, }

Many years ago the question was asked, Who reads an American book? Such a question is asked no longer. But this is the question now, Who reads the report of a School Board? Some think, but very few do. If this is true, there is a very serious defect somewhere, either in the report itself, or in the citizens to whom it is addressed. No claim will be made that the reports of recent years, written in the interests of the people of New Hampton, have been perfect, yet the aim has been, as far as the information needed was accessible and there was ability to present it, to give in clear and exact language the true condition of our schools, the improvements made, and the things needed to perfect our school system. The Board can furnish facts, but it cannot furnish readers.

At the beginning of the school year, a new and weighty responsibility was laid upon the School Board; it was no less a task than to examine, select and adopt a new set of text-books for all our schools. In one respect it was more a privilege than a

burden, for it was the first good opportunity to rid our schools of the great variety of text-books in use, and make them uniform. It was our desire to adopt the best books published, adapted to the needs of our schools. Days and nights were spent in the examination of various lists of text-books, educators were written to for their opinions, and practical teachers for actual results in the school room. Meeting after meeting* was held to discuss these various tests, to make conclusions, when conclusions were possible, and when this could not be done, more time was taken for examinations, or other text-books sent for. All the books adopted received the sanction of the entire Board. Some of them were believed to be the best published on the subjects treated, by every member of the Board; in others there was not that same unanimity in belief, though there was in action—the preference of one had to yield to the preferences of the others. In other cases no member was fully satisfied with the book adopted, but no other seemed as good. Taken collectively, the Board is well pleased with the selection, yet they were conscious that they were not infallible judges, and that the test in the school-room would, in all probability, make manifest that in some cases a better choice might have been made. But this they believe, that no Board in the state devoted more time or took greater pains in the selection and adoption of text-books. A great gain has been made in this particular, that every school has been supplied with a complete set of text-books for the teacher, and a dictionary for both teacher and scholars, with but little expense to the town. This was never true before.

Greater success was obtained than was expected, in carrying out the instruction of the district in selling books. The greater part, by far, bought, which is the better way, that the children may have the use of the books they study in term time, in vacation as well, but it is doubtful owing to the action of joining towns, if this can be continued to the same extent in coming years.

Our school-houses have been, hitherto, very inadequately supplied with blackboards. This past year four school-houses have received new or additional boards, and still the supply does not meet the demand. The teacher in every school is required to answer this question, "Has the school a proper supply of blackboards?" Five answer yes; three, no; one, fair. Even this verdict is too favorable; there is not more than one or two school-houses where more blackboard could not be used to advantage.

Hitherto our schools have lacked, in helps for the various branches of study, almost everything. Last summer the Board purchased a complete set of school charts for each school, at a cost of \$16.00 per set; time of payment, one year from purchase. These charts are designed to be helps in nine branches of study taught in our ungraded schools. They have given great satisfaction, have been put to daily use, and have abundantly proved the wisdom of putting them into our schools. The teachers bear testimony to their great value; and the wonder is, why something of the kind had not been introduced long before. We are confident that far greater progress has been made than would or could have been made, had not these charts, or something similar, been introduced.

At the beginning of the school year the Board prepared a course of study covering a period of nine years. It is based on a school year of twenty weeks. The tendency has been to reach advance studies before prepared for it,—to read in the fifth reader, when the fourth or third would be more fitting; to be in an advanced class in arithmetic all too soon to understand it and to make reasonable progress. There is also a tendency to omit certain branches of study which they have no liking for. This greatly impairs their school training. It was not expected the course laid down could be conformed to the first year, but our teachers were instructed to approximate toward it. The hope is that, in the near future, the larger part of our school children will pursue this course, with such modifications

of it as may seem necessary to make from time to time. Then those who are judged worthy of it may be promoted, at the end of each year, to the next higher grade, and, on completing the course, be graduated from our public schools. We must make the most of our school system, since the larger part never enter higher grades.

When the district made an appropriation of \$400.00 above what the law required, the Board expected to be able to have three terms of eight weeks each for all our schools, or twenty-four weeks for the year, but after a time we were informed that the school money required by law would be only \$600.00, instead of \$647.50, as it has been for years past. The reason for this we do not yet understand. Other disappointments reduced the twenty-four weeks to twenty-two weeks. But this was not all; almost at the last moment we were disappointed that we could not have, by twenty-five dollars, what we had calculated upon from the dog tax of last year. In consequence, five schools were closed one week earlier than had been announced. Thus our schools have been of unequal length—four, twenty-two weeks, and five, twenty-one weeks, contrary to the intention of the Board, and yet the order given the Treasurer leaves a small balance. If this had been known in time it would have prevented the hasty closing of some of these schools. Although the length of our schools has not been what was hoped for, yet, without doubt, it is the longest in the history of New Hampton, and never before has there been three terms for all our schools.

Some plan should be devised for increasing the amount of school money. Whenever a change is made in the amount required by law, it is lessened. As our share of the literary fund depends upon the number of children attending school, with a decreasing number of scholars it is likely to grow less; notwithstanding, the fund increases every year. School No. 9 (Union District) has, for a number of years, paid one-half of the expense of that school from a fund obtained when it had no school children, but another year will nearly exhaust that fund.

The Selectmen state there will be no dog tax for school purposes the coming year. These things prove the necessity of some reliable scheme for raising more school money. Should the District fail, by some caprice, to vote an extra appropriation, as it did three years ago, it would reduce the length of schools to a low and pitiable point. Unless the state takes the matter in hand, New Hampton must. An appropriation of not less than \$500.00 must be voted this year, above what the law requires, to maintain the present standing of New Hampton schools.

The number of different scholars in school this past year is 168. Boys, 86; girls, 82. This is a loss of 25 from the year before, nearly 13 per cent. Not a school increased its number; two maintained their own, the others suffered a loss from one to seven each. This is too great a loss for a single year. The population of the town has decreased less than 13 per cent. in ten years. For the children in school to decrease, in a single year, as high a percentage as the population in ten years seems almost unaccountable. As there has been a larger number from New Hampton in the Institution the past year than the year before, this would indicate that the children entering school for the first time is not equal to the number leaving.

The Selectmen's enumeration of children between 5 and 15 years of age is 159. Boys, 83; girls, 76. The number enrolled in school for the same ages is 152. Boys, 77; girls, 75. According to this statement, there were 6 boys and one girl not in the public school. One of these is in the Institution; another, six years of age, did not attend; the other five we cannot account for. If the selectmen furnished the School Board, as the law requires, the names, in alphabetical order, of all boys and girls in their enumeration, then it would be an easy matter to ascertain who were not attendants of school, if any, and to test, also, the accuracy of their list. 153 attended the summer term, 152 the fall term and 141 the winter term.

There has been a marked improvement in regularity in attendance. Last year the number of absences of all kinds

was 7,382 in half days; this year, it is 6,156. The percentage of daily attendance last year was 75; this year, it is 83, a gain of 8 per cent. This is very gratifying. There has been an improvement also in the number on the roll of perfect attendance. There were 46 in the summer term, 40 in the fall term and 38 in the winter term. If we add to these numbers those who were sometimes tardy, but never absent a half day, the result would be, summer term, 52; fall term, 44; and winter term, 43. The following shows the percentage of daily attendance for each school for each term, with the average percentage for the year:

	SUMMER TERM.	FALL TERM.	WINTER TERM.	FOR THE YEAR.
No. 1,	87	82	89	86
No. 3,	90	81	74	82
No. 4,	87	82	66	78
No. 5,	88	88	76	84
No. 7,	77	76	77	77
No. 9,	88	90	97	92
No. 12,	82	70	72	75
No. 13,	92	86	73	84
No. 16,	79	95	89	88
	—	—	—	—
AVERAGE,	86	83	79	83

Any, who desire, can easily see what schools did the best in regularity of attendance, and what the poorest. Situated as our schools are, 85 per cent. is certainly a good average and 90 a high average.

The percentage of scholars in the different branches of studies is as follows: Physiology, orally or in class, all, or 100 per cent.; Reading and spelling, 99; Penmanship, 88; Arithmetic, 87; Geography, 50; Grammar, 36; Algebra, 10; History, 7; Composition, 5; Book-keeping, less than one per cent. The number in some of the branches is all that we could expect or desire; in others, it is altogether too low. This

is especially true in history and composition. 7 per cent. of the scholars in one and 5 per cent. in the other is far from what ought to be. Nothing less than insisting that, as far as practicable, the course laid down shall be complied with, will make the number in each branch what it should be.

For the nine schools of three terms each, twenty-seven terms in all, the Board employed fifteen teachers. Of these, seven taught one term each; four, two terms each; and four, three terms each. Four of the nine schools had the same teachers for the year; three schools had the same teachers for two terms, and a different one for the other terms; two schools had a different teacher every term. The Board does not believe in making changes unless there is a reason for it. In order to retain three of our best teachers at the end of the summer term, a small increase in wages was offered. Two of them were retained for the year; the other was retained only for another term in a different school. We are pleased with the record as it is, but other teachers were re-elected for a second term, and, had the wishes of the Board been complied with, we could probably have reported the same teachers for the year in seven schools. Though one school was closed in the summer term, before the allotted time, for failure of the teacher to govern, which was a grief to us, and some others did not fully meet our expectation, yet we are confident that New Hampton never had, on the whole, so good a corps of teachers as the past year. According to the independent judgment of each member of the Board, all but two of the fifteen teachers were considered good, and some of them are regarded as superior teachers. In consequence, we believe that never before has so great progress been made in a single year. The repeated instruction to teachers to examine every lesson before hearing it, and to teach generally without text-book in hand, is bearing some fruit, for which we are glad. When all teachers will do so, our schools will advance well on towards perfection. To the four essentials for a good teacher, stated in the last report, viz., character, scholarship, adaptation to teach

and ability to govern, we must add a fifth, and this is attractiveness, a lovable nature. Experience has taught us that the good will of pupils must be obtained, to win the largest success. If pupils do not love their teacher, they do not wish to attend school, and many a parent consents to have their children leave. This breaks down the high percentage of attendance desirable, and otherwise demoralizes the school. Unfortunately, too many parents form their opinion of the teacher by the sayings of their children, and yield too readily to their wishes, if the children's verdict is unfavorable. But the attractive teacher, with the other qualities mentioned, wins the hearts of the children and the parents, too. We had a few teachers of this kind, and it added much to the prosperity of the school. Not every teacher can rule by love. Some can command respect, but cannot win the affection. We had several teachers of this kind. They taught good schools, yet did not secure the allegiance of the heart.

As a natural consequence, as we had better schools, we had to pay higher wages. The average wages this year have been \$25.30 per month. Last year they were \$24.17; the year before, \$20.47. It is worthy to be remembered that the rule is, cheap teachers, poor schools; sometimes it is otherwise, but it is the exception. The wages that will secure a good teacher may not be more than one dollar per week higher than a much inferior teacher demands, and the difference in the school is likely to be the difference between a good and an almost worthless one.

With, then, the best teachers New Hampton ever had, with longer schools, with a complete supply of text-books for every teacher and every scholar, which was never true before, with charts to illustrate almost every subject taught, beside furnishing additional information on other subjects, we can rejoice at the progress made.

Reference was made in the last report to gains made, under the present school system, over the district system which pre-

ceeded it. The time has now arrived when any town can return to the district system if it chooses. The common objection to the present system is, that it costs more. This is true. It has cost, in its officers, nearly \$70.00 per year more than under the district system. This has not been a heavy burden on the tax-payers. If the schools have not been improved, then it is a waste, however small, and should not be tolerated. If the schools have been improved, then the small increase in expense is as nothing, compared to the gain in mental development. Notice the gains. The first is the increase in length of schools. The following is the average length for each of the last five years under the district system :

For the year ending March, 1882, it was 12 8-11 weeks.

"	"	1883,	"	13 6-7	"
"	"	1884,	"	14 1-20	"
"	"	1885,	"	16	"
"	"	1886,	"	16	"

Average for the five years, about 14 1-2 weeks.

For the year ending March, 1887, it was 19 1-9 weeks.

"	"	1888,	"	19 1-10	"
"	"	1889,	"	15 1-2	"

(No extra appropriations in 1888.)

"	"	1890,	"	20	"
"	"	1891,	"	21 4-9	"

Average for the five years under the present system, 19 weeks.

A gain of 4 1-2 weeks per year is worth something. A far greater gain is in giving every school nearly the same number of weeks of school. Under the district system, some districts had two or three times as many weeks of school as others. To return to that system the disproportion would be greater than ever. The decreasing population and diminishing of property would prevent some districts, whole years at a time, from having

any school, or, if they had, the term would be too short and the wages too small to command any but inferior teachers. Again, the purchase of school-houses, with their equipments, would be a heavy burden to the weaker districts.

Before, one person elected one teacher; now, three persons elect all. It is common sense, that the judgment of three persons is better than one, when any care is taken in the selection of the Committee, or Board. The wisdom of the town, collectively, ought to be greater than the wisdom of eight or ten districts, separately, in electing a Board or Committee to manage the interests of our public schools. It can be seen by the present report that great improvements have been made that were unknown, or untouched under the district system. No serious thought ought to be entertained by any one to return to a system that has outlived its usefulness. The present system may need improvement, but it has proved its right to live. The most important thing is to elect the best persons, who are willing to serve on the School Board. It is a responsible and trying position for any one, and any one fitted for the trust may not desire it; but for the love of the children and the interest of the rising generation, some may be willing to serve, thankless as the position is.

The past year new school furniture was put into the village school-house, and the walls were re-papered. This school-room, which before was inconvenient and gloomy, is now attractive and cheerful.

It was a great mistake that the district failed to appropriate money for painting all the older school-houses. They now look more dilapidated and unsightly than ever, and a larger appropriation is now necessary for this work. We hope there will be no disposition this year to defeat such a needful outlay.

Appropriations should also be made to shingle school-houses Nos. 4, 5 and 13.

It will be seen by this report that the past year has been one of great progress. In almost every respect an advanced step

has been taken, and, as a Board, we are exultant over it. Everything is tending in the right direction. It is easy to find fault; complaints may be real; no one of us is infallible; our judgment sometimes will err; but, notwithstanding all this, a few years of continued progress like the last will make our schools the just pride of New Hampton.

Whole amount of school money,	\$1,593.87
Average amount to each scholar,	9.00
Whole number of weeks taught,	193
Whole number of terms taught during the year,	27
Whole number attending school during the year,	177
